

Authentication & Security – Resume Project Description

Project: Authentication & Security Module

- Developed a secure authentication system using Node.js, Express, and MongoDB.
- Implemented user registration and login with encrypted password storage using bcrypt.
- Designed JWT-based authentication for secure and stateless API access.
- Built custom authentication middleware to protect sensitive routes.
- Managed environment variables for database credentials and security keys using dotenv.
- Integrated MongoDB Atlas with IP whitelisting and user-based access control.
- Followed GitHub security best practices using .gitignore to prevent credential leakage.

Tech Stack:

Node.js, Express.js, MongoDB Atlas, JWT, Bcrypt, Git, GitHub
